The Rothe Companies have been providing engineering and design services, tailored to meet our customers' exact requirements, for years. Our engineering team creates original designs, based on customer specifications. Our design team also can use drawings or models of existing hardware, conceptual requirements, or a combination of these for a final design.

Rothe's Engineering Capabilities Continue to Grow:

- Our projects are designed and developed using ProE solid 3D modeling. Structural analysis is performed using both Mechanica and NASTRAN. If dynamic or simulation studies are required, full dynamic and clearance analysis is performed using DENEb simulation software.
- The REI Engineering team has proven capability in mock-ups, trainers, Ground Support Equipment and flight hardware design, analysis, and testing.
- REI's control systems and electrical capabilities include DCS, PLC, SCADA, photo-voltaics, and motor control.
- In-house Manufacturing and Calibration services make REI capable of providing turn-key products.

Your Rothe Contact for Engineering/Design:
"Trey" T.H. Hall, III, P.E., Acting Director, Engineering

Rothe Enterprises, Inc.
920 Gemini St. Houston, TX 77058
281-480-3855 - office | 281-480-3655 - fax

Rothe's Engineering/Design team in Houston has grown significantly over recent years and is now among the most diverse in the region, serving both government and private sector clients.

Call 281-480-3855 to learn more.

Our Engineering Disciplines include:

Mechanical
Aeronautical
Electrical
Industrial
Chemical
Control
Project

Our Experience includes Engineering Development of:

Oil Field Equipment
Control Systems
Tooling
NASA/DOD Equipment
Structural Designs
Electrical Systems
State-of-the-Art Drafting (Y14.5M-1994)
Procurement

and much more.
